

ARM GitHub Organizations

- ▶ ARM has historically had one GitHub Organization called [ARM-DOE](#) which housed a number of code repositories including Py-ART, ADI, and ACT.
 - Recently have shifted this organization to host only ARM funded or supported repositories
- ▶ Expanded to include [ARM-Synergy](#) and [ARM-Development](#)
 - ARM-Synergy is an Organization for ARM/ASR PI's to host code repositories
 - ARM-Development is an Organization created to be a sandbox to foster ideas and collaborations
- ▶ To create in either, please use the Ask Us button on the ARM webpage with “Other” as what you need help with

Requirements

- ▶ All ARM organizations will require vulnerability scanning and anti-virus scanning to be enabled which will be performed by ARM staff on initial set up
- ▶ Additionally, all organizations have a security team set up with read capabilities to all repositories to enable additional virus scanning per DOE policies
- ▶ Descriptive readme files to inform potential users of what the code is and how to use it
